PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with 2.6+ years building **AWS-native infrastructure** and GitOps pipelines for production systems. **Delivered \$177K cloud cost savings**, 99.9% uptime, and **65% faster deployments** at scale. Strong in Kubernetes, Terraform, DevSecOps, and **observability** — with a track record of **owning infrastructure** end-to-end across startups and enterprise clients.

SKILLS

- Kubernetes, EKS, Docker, Helm, Kustomize, ArgoCD, RBAC, Ingress, HPA, Rolling Updates
- AWS (EKS, EC2, S3, RDS, Lambda, VPC, IAM)
- GitHub Actions, GitLab CI/CD, Jenkins, ArgoCD
- Terraform, Ansible, CloudFormation
- FinOps, Cost Optimization, Auto-Scaling, AWS Cost Explorer, AWS Billing, S3 lifecycle policies
- Prometheus, Grafana, ELK Stack, CloudWatch
- Trivy, AWS Secrets Manager, DevSecOps
- Bash, Python, Apache Kafka
- NGINX, HAProxy, Load Balancing, CDN

EXPERIENCE

DevOps Engineer | Anvex AI Technologies | Mumbai, India

May 2026 – Present

- Designed **CI/CD pipelines** using **GitHub Actions** and **Docker**, **Kubernetes** reducing build times by 50%
- Engineered cost-optimized **AI backend deployments**; rightsized server instances and managed **GPU-accelerated** workloads for ML inference pipelines.
- Managed **Linux server environments** (Ubuntu/RHEL) across dev, staging, and production — handling user permissions, cron jobs, disk management, **SSH hardening**, and kernel-level troubleshooting to **maintain system stability**.
- Built **Terraform modules** for automated EC2 and S3 provisioning across dev, staging and production environments.
- Performed **Kubernetes deployment** activities by creating deployment manifests, services, ConfigMaps, and troubleshooting containerized applications in development environments.

Cloud Engineer | ApMoSys Technology | Mumbai, India

December 2023 – April 2026

- Delivered **\$177K / 34% annual cloud cost savings** by analyzing AWS usage patterns and implementing Reserved Instances, rightsizing, **auto-scaling improvements**, and S3 lifecycle policies.
- Automated 90% of **infrastructure provisioning** using Terraform and **Ansible**, reducing environment setup from 8 hours to 30 minutes.
- Automated repetitive operational tasks (log rotation, health checks, backup verification, and alert triage) using **Bash and Python scripts**, eliminating ~15 hours/week of manual effort across the team.
- Led **CI/CD modernization** for enterprise client Mahindra — increased deployment frequency 3× and reduced deployment failures by 50%.
- Integrated **DevSecOps** (Trivy, AWS Secrets Manager) into CI/CD pipelines, cutting **security incidents by 40%**.
- Collaborated with application, infrastructure, and operations teams to implement **cost optimization** actions without impacting performance, availability, or SLA.
- Supported BAU cloud operations, **incident troubleshooting**, and **service reliability** activities across AWS infrastructure including EKS, EC2, RDS, S3, VPC, and IAM.
- **Built monitoring dashboards** using CloudWatch, Prometheus, Grafana, and ELK to improve operational visibility, alerting, and incident response.

PROJECTS

Cloud-Native Internal Developer Platform (IDP)

Terraform | EKS | ArgoCD | Helm | GitHub Actions | AWS IAM | Python

- Designed a self-service platform enabling developers to provision EKS namespaces, S3 buckets, and IAM roles within minutes.
- Built and standardized 12+ Terraform modules with policy-as-code and drift detection, reducing configuration inconsistencies by 85%.
- Implemented ArgoCD ApplicationSets for multi-tenant deployments with RBAC-based access control.
- Reduced platform provisioning time to under 5 minutes, improving developer productivity.

End-to-End GitOps CI/CD Pipeline

GitHub Actions | ECR | EKS | ArgoCD | Helm | Prometheus | Grafana

- Designed a production-grade CI/CD pipeline from code commit to Kubernetes deployment using GitOps principles.
- Implemented Helm-based deployments with Blue-Green and Canary strategies, reducing post-deployment issues by 40%.
- Integrated Trivy security scanning, blocking critical vulnerabilities before container registry push.
- Achieved deployment time of <8 minutes with automated rollback mechanisms.

CRCS Refund Portal – High-Traffic System

AWS EKS | RDS (Multi-AZ) | CloudFront | S3 | NGINX | CloudWatch

- Designed and deployed scalable infrastructure for a high-traffic portal using ALB, Auto Scaling, and Multi-AZ RDS architecture.
- Built system to handle high concurrency (load-tested up to ~10K users) with 99.9% uptime.
- Implemented IAM policies and Secrets Manager for secure credential handling.
- Resolved critical production issues and implemented fixes, reducing recurring incidents by 40%.

Mahindra Car Lease Hub – CI/CD Modernization

Jenkins | GitLab CI/CD | Docker | Kubernetes | Ansible | ELK | Grafana

- Migrated legacy deployment pipelines to modern CI/CD workflows, improving deployment frequency by 3x.
- Reduced deployment failures by 50% using automated testing and validation gates.
- Implemented centralized logging (ELK) and monitoring dashboards (Grafana), reducing MTTR by 35%.

EDUCATION

Master of Computer Applications (MCA)

GIET University | 2024 | CGPA: 8.3 / 10

Bachelor of Computer Science (BSc)

Utkal University | 2021 | CGPA: 7.2 / 10

HONORS & AWARDS

- Star Employee Award – ApMosys Technologies (2024)
- Gem of the Year – ApMosys Technologies (2025)
